Date

Test Location

Tests performed in a Certified ANSI Semi-Anechoic Chamber and Shielded Room.

Test Site Location : Galanz

25 South Ronggui Rd., Shunde, Foshan, Guangdong, China

Tel : (86)-757-23612785

Fax : (86)-757-23612537

Test Facility

The test facility was recognized, certified, or accredited by the following organizations:

- CNAL LAB Code: L2244
- Galanz EMC Laboratory has been assessed and in compliance with CN AL/AC01:2002 accreditation criteria for testing laboratories (identic al to ISO/IEC 17025:2005 General Requirements) for the Competence of Testing Laboratories.
- FCC Registration No.: 580210 Galanz EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC was maintained in our files.

Government Disclaimer Notice

When government drawing, specification, or other data are used for any purpose other than in connection with a definitely related government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawing, specifications, or other data, is not to be regarded by implication or otherwise in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell patented invention that may in any way be related thereto. This report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government.

Reproduction Clause

Any reproduction of this document must be done in full. No single part of this document may be reproduced without permission from ECMG Electronic Technical Testing Corp (Shenzhen).

Opinions and Interpretations

This test report relates to the abovementioned equipment under test (EUT). Without the permission of ECMG Electronic Technical Testing Corp (Shenzhen) Test Lab this test report is not permitted to be duplicated in extracts. This test report does not entitle to carry any test mark on this or similar products. The manufacturer has sole responsibility of continued compliance of the device.

Statement of Measurement Uncertainty

The data and results referenced in the document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities that can account for a nominal measurement error. Furthermore, component and process variability of devices similar to that tested may result in additional deviation.

EUT Description

Grandstream Networks, INC., model tested GXE5116 (referred to as the EUT in this report) is an IP PBX.

Technical specifications of the EUT are as belows:

Parameter		Range
Turumeter		Kunge
Basic	Rated voltage	12VDC
parameters	Rated Current	1.5A
	Power Cable	Power adapter connection
	FXS Ports	FXS port to be connected to analog phones / fax machines.
I/O Ports	Network Interfaces	Single or Dual (GXE5102 only) 10M/100M/1000M RJ45 Ethernet port (s) with integrated PoE Plug (IEEE 802.3at-2009)
	FXO Ports	2 ports (GXE5102); 4 ports (GXE5104); 8 ports (GXE5108); 16 ports (GXE5116)
	RESET	Factory Reset button. Press for 7 seconds to reset factory default settings.
	Peripheral Ports	USB, SD
	Input	100-240VAC 50/60Hz 0.4A
Adapter (Mass	Output	12VDC,1.5A
power)	Model	SFF1200150A1BB
	Brand name	Mass power

NOTE: For more detailed informations or features please refer to user's manual of EUT.

EUT Model Derived

Models of GXE5116 and GXE5108 are the same product, they have the same circuit principle&PCB layout, differences between these two models are only FXO port numbers as belows:

P/N	LAN port	WAN port	FXO ports
GXE5108	1	0	8
GXE5116	1	0	16

The worst-case model GXE5116 was selected for final testing.

Test Summary

The Electromagnetic Compatibility requirements on model GXE5116 for this test are stated below. All results listed in this report relate exclusively to this above-mentioned model as the Equipment under Test. This report confers no approval or endorsement upon any other component, host or subsystem used in the test set-up.

Emission Tests							
Specifications	Description	Test Results	Test Point	Remark			
FCC Part 15.107 ANSI C63.4 -2003	Conducted Emission	Passed	AC Input Port	Attachment 1			
FCC Part 15.109 ANSI C63.4 -2003	Radiated Emission	Passed	Enclosure	Attachment 2			

Test Mode Justification

Pre-scan has been conducted to determine the worst-case from all possible combinations between available operation modes. The following mode was chosen for the final test as described below.

Connected to PC mode:

Connected an notebook PC to INTERNET port of the EUT by an RJ-45 signal line and ping "192.168.0.160 -t" to EUT, then connected one phones to PHONE port of the EUT and established a call link between them and measured it.

PoE mode:

Let EUT operates at PoE mode and measured it.

EUT Exercise Software

No test sofware support this test.

Equipment Modification

Any modifications installed previous to testing by Grandstream Networks, INC., will be incorporated in each production model sold or leased in United States.

There were no modifications installed by ECMG Electronic Technical Testing Corp (Shenzhen). Test personnel.

ATTACHMENT 2 - RADIATED EMISSION MEASUREMENT

	I	I	I			
CLIENT:	Grandstream Networks, INC	TEST STANDERD:	FCC Part 15,Subpart B, Section 15.109			
MODEL NUMBERS:	GXE5116,GXE5108	PRODUCT:	IP PBX			
EUT MODEL:	GXE5116	EUT DESIGNATION:	Home or Office			
TEMPERATURE:	23°C	HUMIDITY:	49%RH			
ATM PRESSURE:	103.0kPa	GROUNDING:	None			
TESTED BY:	Sewen Guo	DATE OF TEST:	January 22 nd , 2013			
TEST REFERENCE:	ANSI C63.4 -2003					
TEST PROCEDURE:	The EUT was set up according to the guidelines of ANSI C63.4 -2003 for emissions. An EMI receiver peak scan was made at the frequency measurange (pre-scan) in an Anechoic chamber.signal discrimination was then peand the significant peaks marked.these peaks were then quasi-peaked in the ency range of 30 MHz to 1GHz and average and peak in the frequency range of 5GHz at an anechoic chamber. The following data lists the significant emission frequencies, measured level ction factors (including cable and antenna correction factors), and the corrections against the limits. Explanation of the Correction Factor are given as for FS= RA + AF + CF - AG					
	Where: FS = Field Strength RA = Receiver Amplitude					
	AF = Antenna Factor					
	CF = Cable Attenuation Factor					
	AG = Amplifier Gain					
TEST MODE	Conneced to PC &PoE mode					
TESTED RANGE:	9K-30MHz and 30MHz to 5,000MHz					
TEST VOLTAGE:	AC 120V/60Hz					
RESULTS:	The EUT meet the requirements of test reference for radiated emissions. The test results relate only to the equipment under test provided by client.					
CHANGES OR MODIFICATIONS:	There were no modifications installed by ECMG Electronic Technical Testing Corp (Shenzhen). Test personnel.					
M. UNCERTAINTY:	Freq. ± 2x10 ⁻⁷ x Center Freq., A	mp \pm 2.6 dB

6	/	/	/	/	/	/	/

- 1. The field strength is calculated by adding the antenna factor, cable factor. The basic equation with a sample calculation is as follows: Emission Level = Reading Level + Antenna Factor + Cable Loss.
- 2. For band in 9KHz to 30MHz, Pre-scan has been conducted to determine the worst-case. connected to PC mode was selected for the final testing.
- 3. The limits shown are based on quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz. the bandwidth of Test Receiver was set at 200Hz in frequency range of 9KHz to 150KHz, 9kHz in the frequency range of 150KHz to 30MHz.
- 4. All emission levels in the frequency range of 9KHz to 30MHz are 20dB below the official limits that are not reported.
